

Transition Patients

This document outlines the process that needs to be followed for Transition patients (i.e. patients who were given tokens in the Inhealthcare portal, but finish care after migration to the ADI PainSense portal).

This process can be done at any point during the patients care.

However, to ensure that we capture all patients who will have before and after outcome data follow the below steps at their discharge appointment.

Step 1

Patient completes PSEQ and Dolo requirements on discharge appointment as normal (or before if they have completed it independently). This is using old log on/password that was created with their first token.

Step 2

Clinician or Admin registers the patient on the PainSense portal (name, DOB and NHS number only)

Step 3

Click to enrol the patient on the pain toolkit pressing “print doc” – DO NOT ISSUE THIS TO THE PATIENT – you can immediately close this without saving.

Step 4

Click submit

This will allow ADI to match the old and new data and formulate the outcome reports.
